

## The **Kewtech KT63** - the **small** multifunction tester packed with **BIG** features

- Continuity with auto null
- Insulation 250V, 500V & 1000V
- Loop – high current & low current (no trip) with low susceptibility to RCD uplift and noise
- PSC / PFC
- RCD – with 30mA auto test
- Mains polarity
- Large display
- IP54 rating
- Robust instrument
- Padded neck strap
- Complete with all the accessories you need to get started

Kewtech's KT63 multifunction tester packs a big punch for such a compact design. Simple to use and comes ready to go in a hard carry case, the KT63 is a UK specific design which enables fast 17<sup>th</sup> edition testing.

During 'dead' testing the KT63 is constantly protecting against inadvertent connection to live circuits, so no bangs. Also, in these functions the KT63 can be set to continuously test in 'hands free' mode.

Loop testing can be conducted by either a low current or high current test. The low current will not trip any type of 30mA RCDs and the high current test measures the true loop impedance which is important when you are near a transformer. PSC/PFC measurements are taken at the same time.

The RCD function tests 30 to 500mA RCDs and has a time saving auto test which will automatically run through all six standard RCD tests whilst you simply stand by the RCD and reset it each time it trips. The 'hands free' option is also available for these live tests. The KT63 comes with a padded neck strap, high quality G7 test leads, hard case, printed manual and an end of line certificate.
